PrescientQA Passport V5™

Streamline V4 to V5 Migration

With the move from CATIA® V4 to V5, companies are looking for solutions to help them plan and budget their migration strategy. Many obstacles stand in the way of smooth data migration. PrescientQA Passport V5 streamlines the process and provides the tools to help define your migration strategy.

A New Level of Knowledge

The Passport package is an affordable quality solution enabling you to manage and control the migration of existing CATIA data:

▶ Can be used either interactively, or in batch mode, identifying the readiness of your CATIA data for migration.

▶ Automatically corrects, reorganises or cleans-up selected migration obstacles.

▶ Recognises and reports significant problems that impede migration.

▶ Provides interactive information and advice to help you navigate the migration issues and approaches.

Using the built-in reporting functionality of Passport, comprehensive metrics are provided. Armed with this knowledge, you are able to plan and implement a realistic migration strategy based on an accurate analysis of the data.

Streamlined Migration

Using the results generated from Passport, users at all levels in the organisation can quickly identify the areas that will cause delay in the migration process. Passport's reporting helps you decide where to focus design resources to streamline your migration.

Passport is flexible and configurable to meet your company's migration strategies, so only relevant issues that apply to your data are identified.

Modeling issues can be assessed at any level with results that provide an overview of the most common failures, down to a summary of the issues on an element-by-element basis. This in-depth reporting gives managers a complete and accurate perspective of the readiness of data for migration.

prescientQA™

Easier, Faster and Cost Effective

Migrating data from V4 to V5 is not without issues and no silver bullet exists to make the process completely painless. Used in conjunction with Dassault utilities (CATCLN, CHKTOP, SPECSCHECK, and GEOMCHECK) the process can be streamlined and dramatically improved with Passport.

Automatic clean up and correction of many issues reduces manual rework delivering immediate timesavings and reduced overhead costs. Issues that require manual attention are identified, freeing your designers to focus on these corrections and alleviating the need to manually review each model for problems.

Preparing for the Future

Many companies will continue to work with V4 for some time, even while implementing CATIA V5. Wouldn't it make sense if you could learn to do "the right things" today, so that your V4 data would migrate more easily tomorrow?

Interactive, onscreen advice supports the development of best practice methodologies enabling you to refine design practices in preparation for the future migration. Information generated by the reports can be fed back into the design teams ensuring consistent modeling practices are established and maintained to smooth the ongoing migration of V4 data.

A Package to Suit You

Available as a full system, subscription package, add-on to an existing PrescientQA™ installation, or as a service offering, Passport enables companies to manage their data migration in the most cost-effective way.

A Solid Foundation

Passport is based on the proven, award-winning PrescientQA quality assurance software, which is correcting errors, minimizing change orders and revolutionising quality assurance processes for the world's most recognised manufacturers.
