

How Do You Measure The Quality That You Supply?

supplyQA

PrescientQA is the cutting-edge software in this field. It provides automated data quality checking across multiple CAD platforms that leverage design quality to new levels.

SupplyQA enables suppliers of Renault and PSA to conform to the exact design requirements and standards required by either manufacturer. It has been designed specifically to meet the quality standards demanded by Renault/PSA supplier relationship in close cooperation with TDCi. The result - improved quality and faster time-to-market to all suppliers in the supply chain.

SupplyQA has all the features available in the DesignQA and GeometryQA products, with the exception of the ability to create standards ensuring that only OEM supplied standards are deployed - ensuring consistency throughout the design chain.

By using PrescientQA's security features and model stamping, the customer and supplier can both be assured that the model quality reached conforms to the required standards.

DesignQA[®], the product line's flagship product, detects, measures and prevents loss of quality in the model during the design process. Standards are set by the manufacturer and DesignQA will automatically test and check the model to these standards, score it for accuracy, and highlight all problem areas identified.

GeometryQA[®] identifies and eliminates geometric problems that restrict data exchange with suppliers and internal customers.

PrescientQA[®] engineering quality tools enable the quantitative assessment and improvement in the quality of design models, helping to:

- Determine the effect errors have on cycle time and development costs
- Reduce rework rates and shorten design cycles
- Efficiently track product quality at different design stages
- Ensure model quality throughout the design process
- Replace manual procedures with rapid automated solutions
- Identify cost savings and productivity measures that occur when a design closely adheres to corporate standards
- Highlight training requirements
- Ensure supplier quality meet its deadlines
